Timber Information

Administration

This operating plan is for the operating period of May 1, 2021 to April 30, 2022 under the Forest Management Agreement (FMA) between Her Majesty the Queen in the right of Alberta (the Province of Alberta), and Alberta Pacific Forest Products Industries and under the Coniferous Timber Quotas (CTQ) with Northland Forest Products Limited. The harvest area details in Appendix 1 and 2 are for summer operating conditions only. Additional harvest areas for operations in the winter of 2021-22 will be submitted for appraisal by October 1, 2021.

Alberta-Pacific Forest Industries Inc.'s (Alberta-Pacific) disposition for these operations is FMA9100029. Northland Forest Products Inc.'s (Northland) dispositions for these operations are CTQA160001, and CTQL030016.

Annual Allowable Cut Chargeability

All deciduous and incidental deciduous timber harvested under this operating plan within the boundary of FMA9100029; or purchased from Quota Licenses or Community Timber Permits within the FMA area boundary, will be chargeable to the Alberta-Pacific FMA deciduous Annual Allowable Cuts (AACs) as identified in the General Development Plan (GDP). The deciduous will be manufactured in the Alberta-Pacific Forest Industries Inc. pulp mill located north of Boyle in Township 68 Range 19, West of the 4th Meridian.

Coniferous and incidental coniferous timber harvested under this operating plan, from stands designated as belonging to Alberta-Pacific within the approved Spatial Harvest Sequence (SHS), and additions thereto, will be chargeable to the Alberta-Pacific FMA coniferous AACs as identified in the GDP.

Coniferous and incidental coniferous timber harvested under this operating plan, from stands designated as belonging to Northland within the approved Spatial Harvest Sequence (SHS), and additions thereto, will be chargeable to the Northland CTQ/CTL coniferous AACs as identified in the GDP. Coniferous Timber harvested under Northland CTQs, if not sold to other manufacturing facilities will be manufactured in the Northland Forest Products Ltd. saw mill located north of Ft. McMurray in Township 91, Range 9, West of the 4th Meridian.

Alberta-Pacific requires coniferous fiber supply to meet pulp sales contracts. Alberta-Pacific is pursuing all reasonable sources of conifer chips. Alberta-Pacific has and will continue to utilize coniferous timber to meet mill requirements when coniferous chip supplies are not available at a reasonable cost. Alberta-Pacific is currently looking at opportunities for underutilized coniferous, and insect and disease endangered coniferous.

The actual sale and delivery of salvage volumes is at the discretion of the Public Lands disposition holder who has received title to the timber. The hectares withdrawn in each FMU will be multiplied by the average coniferous and deciduous volumes per hectare for the FMA, as approved by the Minister of Agriculture and Forestry. The volumes will then be distributed proportional to the AACs in each FMU. TM7 submissions for AAC cut control (zero dues rates) will be submitted by the individual timber operator in August, November, February and May annually.

Scaling

All logs harvested by Alberta-Pacific and Northland will be weigh scaled unless the Province has given the receiving mill permission to report by production.

TM262 Scaling Populations are approved annually prior to deliveries in the Timber Year. If any new populations, such as fire kill deciduous, are identified during the year, TM262s will be prepared and brought forward for approval.

Satellite Yards

Alberta-Pacific and Northland Forest Products operate remote yards with and without weigh scales throughout the FMA area. The Alberta-Pacific deliveries to the remote yards that do not cross weigh scales will be randomly sampled. Alberta-Pacific and Northlands will report any unscaled volume in satellite yards in their Fire Control Plans.

Utilization Standards

Alberta-Pacific's tree utilization standards are 15/10 and Northlands' are 15/10 as identified in 4.2.1 of the 2018 Northeast Alberta Operating Ground Rules (OGRs). Alberta-Pacific coniferous timber may be operated to the utilization standards of the receiving mill if their approved utilization standards are provided prior to harvest.

Alberta-Pacific's customers expect a high-quality pulp and in order to maintain markets the Company cannot allow deleterious material to enter the supply chain. In order to be able to accept any salvage from fires the Company has developed a utilization standard to minimize carbon contamination. Should an opportunity for fire salvage become available, a Fire Salvage plan, outlining the salvage utilizations standards, will be submitted at that time.

2021 Harvesting Schedule

Planning and Block Schedules

Blocks that are designated for harvest under non-frozen conditions in the 2021-22 timber year, are detailed in Appendix 1 Table 1. The associated temporary roads are in Appendix 2 table 1 and watercourse Crossings in Appendix 2 Table 2.

An Operating Schedule and Timber Information (OS) amendment, to append blocks and roads for frozen harvest conditions in 2021-22, will be presented by October 1, 2021, for appraisal and approval by November 1, 2021. For planning units not laid out or not yet approved, the blocks and their associated roads will be amended to Appendix 1 and 2 once the Forest Harvest Plan (FHP) is approved.

A copy of Appendix 1 and 2, that has been revised to include amendments can be provided to AAF upon request.

Plans for salvage of fire-killed timber will be developed in accordance with the processes laid out in the AAF document “Fire Salvage Management and Operations Planning” unless otherwise approved by the AAF Area Manager.

Table 1 provides a summary of the proposed summer 2021 harvest by Alberta-Pacific and Northland Forest Products.

Table 1
Summer 2021 FMA Volume Summary
Prepared on 2021/04/07

(Values Affected by Rounding)

Operations Type	Operator	Harvest Season	Decid. (m3)	Conif. (m3)	Total (m3)
Conif	Al-Pac	Non-frozen	11,448	59,468	70,916
Decid	Al-Pac	Non-frozen	596,183	83,901	680,084
Conifer	NFPL	Non-frozen	6,117	30,159	36,276

Only volumes from blocks that are harvested under FMA and CTQ authority are summarized in the above table. Blocks within Public Lands dispositions are not included.

Integrated Landscape Management (ILM)

Alberta-Pacific and Northland are committed to the development and application of ILM as described in the Forest Management Plan (FMP). The intent of ILM plans is to coordinate access development and remove merchantable timber prior to the industrial dispositions being approved. This is done in cooperation with the industrial disposition holders and affected Quota Holders. The scheduling of this volume in the Company's fiber supply allows the companies to manage the harvest and delivery levels of timber in the most efficient manner. The harvest and access design is directly related to future ILM initiatives. The purpose of ILM is to reduce the industrial footprint on the landscape, resulting in environmental and economic benefits. It is submitted under separate cover and provides a timely update of oil sands salvage activity.

ILM blocks within a Mineral Surface Lease (MSL) boundary are designated as purchased wood. Their associated wood and roads are not included within the Summer 2021 OS because they will be harvested under authority of the MSL.

FHP Status

Appendix 2, table 1 lists all the currently approved Forest Harvest Plans as well as plans currently under planning or layout. FHP's for the following planning units are due to expire 070124, 072254, 083224, 094094 EAH and 094094 Husky. Al-Pac and Northland Forest Products request that these FHP's be extended to April 30, 2022.

2021 Temporary Road Schedule

In addition to the main haul road system, the Company will require short-term access from harvest blocks to the main haul road system. The construction and abandonment of these roads will be to Class 4 OGRs specifications.

Roads that are required for more than a three-year life will be submitted for Department License of Occupation (DLO) dispositions, unless specifically approved in the Harvest Plan for 5 years. Appendix 2 Table 1 provides a list of temporary non-DLO roads proposed for construction or roads that have been constructed and are still required for completing operations.

Temporary Class 4 road reclamation is tracked and reported monthly to AAF. Locations with significant risk of instability or potential watershed concerns are monitored annually, after abandonment, until stabilized. These monitoring reports are available upon request.

Debris Management

In response to the AAF Debris Management Standards for Timber Harvest Operations Directive, the following strategies will be utilized in blocks harvested by the Company under authority of the FMA:

- Methods described in the *Forest and Prairie Protection Act* and associated Regulations, and/or
- The Northeast Alberta Operating Ground Rules Appendix 2 Debris Disposal Policy, and/or
- Thinly spread slash throughout the block, and/or
- Stumpside processing.

For blocks not within the FireSmart Community Zones (as identified by AAF), the retention of debris piles, as per the directive, may also be utilized in addition to the above strategies. If the retention of debris piles or an alternate strategy which is not listed above is proposed, the strategy will be included in the FHP for approval by AAF.

Appendix 3 lists all cutblocks with outstanding activities such as inventory left to haul and road reclamation.

Access Management

The following policies have been implemented to mitigate access management concerns:

- Temporary road systems will be closed as soon as possible after the harvesting, hauling, and silviculture activities have been completed.
- Information received regarding trapline facilities and activities will be considered confidential and will not be available to the public.
- Harvest blocks and roads are designed to limit sight lines by blending them into contour levels, terrain features, vegetation cover types, and retained stand structure.

Within designated Key Wildlife and Biodiversity Zones and Caribou Ranges, the following access control practices will also be implemented:

- If a significant delay occurs between harvesting and hauling, temporary access controls on roads will be utilized to prevent access by motorized vehicles. These controls may include signage, the placement of logs on the road, snow berms, and/or removal of creek crossings.
- Slash rollback at strategic points (such as at the ends of the block or at the junction of the temporary road and permanent road) will be completed as soon as possible after logging to discourage access by all terrain or four wheel drive vehicles.

Resource User Notifications

Alberta-Pacific and Northland have ongoing communications with all known resource users in or near the Company's harvest operations. The FHP contains information on resource users specific to each planning unit. An Annual Operating Plan (AOP) Summary, which contains basic GDP information and contact information, will be posted annually on the Alberta-Pacific and Northland websites.

Trapper Contacts

Trapper contacts are completed as per the OGRs by Alberta-Pacific's and Northlands' Trapper Coordinators. Information collected is considered confidential and is not presented in plans or on maps, but evidence is available for AAF auditors if required.

Guides and Outfitters

Guides and Outfitters are provided notification and an overview map by registered mail during the preliminary stages of FHP preparation and again when the plan is completed. Any relevant information provided is incorporated in the FHPs.

Land Use Disposition Holders

Companies with Public Lands dispositions in harvest areas are contacted prior to operations entry and agreements are negotiated for road use and facility crossings. The Company deals with field representatives of all industrial users during operations. Details are available to AAF on request.

Public Input

Alberta-Pacific and Northland have continuous programs for obtaining public comments, and concerns relating to the Company's plans and operations. Alberta-Pacific and Northland periodically have public meetings in communities in and around the FMA area. The Company also sets up displays at trade fairs, and team members present in local schools, as opportunities arise. The AOP documents will be posted on the Alberta Pacific website at <http://www.alpac.ca> and through Northland Forest Products upon request. Both Companies have contact information on their respective websites.

The Alberta-Pacific FMP, Timber Supply Analysis (TSA), SHS, FMP Summary, and AOP components (FHPs, GDP, OS, Road Plan and Reforestation Program) are all either posted on Alberta-Pacific's website or on the AAF public website.

Relevant comments and information are utilized in harvest planning and operations as practical.

Wildlife Assessment

Introduction

There are several datasets of key wildlife ranges available from Alberta Environment. Of these datasets, Al-Pacs's FMA overlaps with four of them:

- Caribou range
- Key Wildlife and Biodiversity Zones
- Colonial Nesting Birds
- Trumpeter Swan Lake Buffers

Appendix 5, Table 1 lists all the cutblocks that impact any of these sensitive wildlife areas.

Caribou Range Mitigation Strategies:

1. For Frozen activities within Caribou Range, Operation will strive to be completed by April 1
2. An “early in, early out” strategy will be implemented in that where ever possible, cutblocks within Caribou range will be sequenced as early as possible.
3. Prompt reclamation of access.
4. Avoidance of areas with significant amount of terrestrial lichen, or winter harvesting.

Key Wildlife and Biodiversity Mitigation Strategies:

1. Whenever possible, conduct operations within KWBZ during non-frozen conditions
2. An “early in, early out” strategy will be implemented in that where ever possible, cutblocks within KWBZ will be sequenced as early as possible.
3. Prompt reclamation of access.
4. Reduce new road construction whenever possible

Colonial Bird Nesting Areas Mitigation Strategy:

1. Colonial Nesting bird areas will receive a 100m forested buffer

Trumpeter Swan Mitigation Strategies:

1. Between April 1 and Sept 30, there will be no activities within 800m of the high water mark on identified trumpeter swan waterbodies.
2. No harvesting within 200m of the high water mark on identified trumpeter swan waterbodies.
3. No long term road development within 500m of the high water mark on identified trumpeter swan waterbodies.
4. A special management zone be established between 200-500m from the high water mark where special measures may be implemented, including access control, herbicide use, and line of site. See OGR 7.7.3.3

An amendment to the Wildlife Assessment will be included with the winter Operations schedule amendment in October 2021.
