

Haul route map addendum checklist

In order to get an addendum to the haul route map, contractors will need to supply the following information to Alpac:

- ❑ The source ID you want to haul. (from the contract)
- ❑ The expected number of loads and tonnage to haul from the source (estimate)
- ❑ A list of the registered configurations that will be hauling to Alpac from the source ID (for example, this would be 6AHAY, 7ATRI, 8A86,) This information is required to get appropriate approval for the route and the truck configuration used on that route.
- ❑ A copy of the county approval for any roads that you need to use in order to access the highway.
- ❑ A map of the route that you are asking for approval on (if not included in county roaduse approval)

Please email all of the required information to claus.penno@alpac.ca with the map and road use included as attachments.

Addendums will be processed as they are received.

NOTE: Once an Addendum is completed for any individual haul, Alpac reserves the right to adjust the contracted Tonnage rate (Schedule "B" Contract Price) for delivery of the wood to better reflect the tonnage allowed on each load.
